

Success Story: 5G Failover Solution for Supermarket Chains

- InHand ER805 routers offer LAN or Wi-Fi access for POS, VoIP phones, and video surveillance in the store.
- The WAN1 of ER805 is connected to the Internet through the original export router, and meanwhile, ER805 connects to 5G working as a backup link. When the wired link fails, the network will immediately switch to the cellular network.
- The InCloud Manager offers a visual interface for centralized network management and can also support IT staff to do out-of-band management for VoIP phones and other routers.
