20 W DC-DC Converter P20HxxxxCx-Series

Note:

1. The recommended unbalanced load of dual output converter should be low than 5 %. If the load asymmetry greater than 5 %, it may not be guaranteed to meet all specifications listed. Please contact our technical support for more details.
2. Maximum capacitive load is tested at full input voltage range and full load current.
3. All specifications measured at Ta 25 °C, humidity < 75 %, nominal input voltage and rated output load current unless otherwise specified.
4. Specifications of this product are subject to changes without prior notice.
5. It is not recommended to increase the output power capability by connecting two or more converters in parallel.
6. The converters are not hot swappable

1) Recommended circuit

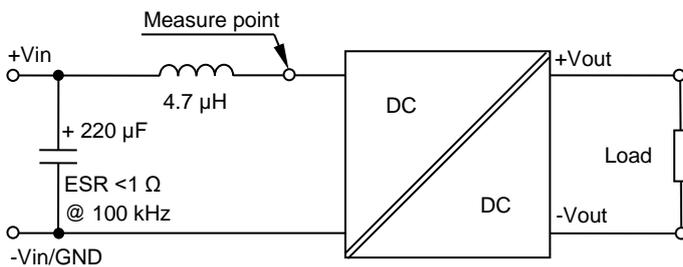

The P20H series is been tested according to the following recommended test circuit before leaving the factory (see Figures 1). If you want to further decrease the input / output ripple, you can increase a capacitance values properly or choose capacitors with low ESR, but the total capacitance of the filter capacitor must not exceed the maximum load capacitance value (see „Model guide“ table).

Trim down resistor formula

$$b = \frac{V_{out} - V_{ref}}{V_{ref}} \cdot R2$$

$$R_{td} = \frac{R1 \cdot b}{R1 - b} - R3$$

Trim up resistor formula

$$a = \frac{V_{ref}}{V_{out} - V_{ref}} \cdot R1$$

$$R_{tu} = \frac{R2 \cdot a}{R2 - a} - R3$$
