#### How To Create A Product Description

Output / signals to output / signals Basic

The extensive range of output modules and options make it possible to achieve almost any combination of Volts and Amps. You can create your own QM configuration online at https://config.emea.tdk-lambda.com/. This method checks your configuration and offers the optimum solution. Alternatively, you can do this manually by using the guide below.

200Vdc (1 x MOPP between modules is available, contact sales for details)

Calculate total output power to select the appropriate converter, then select required Cooling, Connection, Leakage Current and Controls/ 1. Signals from the following table:

Contact TDK-Lambda to validate configuration and issue a part number.
